

On behalf of the organizing committee, we welcome you all to attend our 1st annual meeting of KolGo. Kolkata Gynecological Oncology Trials and Translational Research Group was created with a vision to unify the three major cancer centres in Kolkata and surrounding regional research institutes where both clinicians and scientists will work towards population based/translational studies and academic clinical trials in gynaecological cancers in this region and participate in major International studies. The intention of this meeting is to be thought-provoking and generate research ideas for future studies; the program portrays interaction between our existing and future collaborators and mentors – both national and International. The esteemed surgical faculty have been teachers and mentors to our team- we are privileged to organize a surgical video session, meet the Professor session as well as a session on International oncology training program as an educational outreach of the UKIERI research initiative. The young scientist session will foster interaction amongst various researchers across the city and we hope that we continue to generate interest amongst new researchers and clinicians to work hand in hand.
