RE: NuGenA (Nurse led Genetic counselling in improving awareness and prevention of hereditary breast and ovarian cancers in India)

I am delighted to share this statement of support on behalf of the World Ovarian Cancer Coalition for the above research proposal. This study tackles an important challenge in India relating to ovarian cancer awareness and uptake of genetic screening for at risk family members.

We will be happy to facilitate wider patient public involvement through our global network of ovarian cancer patient advocacy partners.

Kind regards,

Clara Mackay
Executive Director
World Ovarian Cancer Coalition
